

SURVIVING SEXUAL VIOLENCE DURING COVID-19: MEDICAL OPTIONS

Resilience recognizes that sexual violence does not pause during a pandemic. In this unprecedented circumstance, we have worked to identify alternative medical options for survivors who may choose to avoid a hospital. These are deeply personal decisions, and we support whatever choice is right for each person. We want survivors to know, during these uncertain times, they have options.

SERVICES OFFERED IN IL HOSPITAL EMERGENCY DEPARTMENTS

Resilience partners with [17 community hospitals](#) where advocates provide round the clock telephone advocacy to all survivors in the Emergency Department. Here’s what survivors can expect when accessing care in a hospital:

- Forensic evidence collection, forensic photography and toxicology screening (aka “the rape kit”) within 7 days of the incident
- Preventative treatment for Sexually Transmitted Infections (STIs) such as gonorrhea, chlamydia and trichomonas
- Post Exposure Prophylaxis (PEP), a medication to prevent HIV within 72 hours of the incident. [Click this link for more information on PEP](#)
- Emergency Contraception to prevent pregnancy within 72–120 hours of the incident
- Full medical exam to assess for a patient’s overall wellbeing and treatment
- The option to report the crime to Law Enforcement at the hospital
- State-issued voucher that will cover the cost of follow-up care within 90 days of the original visit
- The option to have an advocate assist you over the phone at [these locations](#)
- All care provided in the emergency department is offered at no cost to the patient

SERVICES AVAILABLE IN COMMUNITY HEALTH CLINICS

Community clinics, some of which remain open at this time, may provide many of the options mentioned above. If a survivor is interested in accessing medical care without visiting a hospital, Resilience advocates will provide a connection to trusted partners.

TO CONNECT WITH AN ADVOCATE, PLEASE COMPLETE THIS FORM.

An advocate will reach out to you within 24 hours. Our trusted partners are able to provide the services listed below:

- Emergency Contraception to prevent pregnancy
- Post Exposure Prophylaxis (PEP), a medication to prevent HIV
- Medical exam
- Testing for Sexually Transmitted Infections and Diseases
- Preventative treatment for Sexually Transmitted Infections (STIs)
- Pregnancy Tests
- Options regarding pregnancy such as a termination
